

Ahmed Hegazi

Alexandria | +201090126521 | <https://github.com/hegazi1911>

OBJECTIVE

Flutter developer with hands-on experience building production-ready mobile applications using Flutter and Firebase. Strong background in state management (BLoC, Riverpod), RESTful API integration, and scalable mobile architecture. Experienced in publishing applications to Google Play and managing full development lifecycle.

EXPERIENCE

Flutter Developer Intern - Jan 2024 – Jun 2024

Root Soft - Alexandria

Contributed to the development and maintenance of multiple client-facing Flutter applications within a software house environment.

- Developed features for production Flutter applications following modular architecture principles.
- Implemented state management solutions using **Riverpod**.
- Integrated RESTful APIs and handled asynchronous data streams.
- Managed Firebase services including Firestore and authentication.
- Collaborated with backend and design teams to deliver production-ready releases.
- Used Git for version control and participated in code review workflows.
- Fixed bugs and improved performance in existing applications.
- Apps:
 - **ElKhatma** – Islamic content application ([Google Play](#))
 - **Cliques** – Social/community-based mobile application ([Google Play](#))

Flutter Developer- Jul 2024 – Jun 2025

Kamn - Alexandria

Worked on core product features within a production mobile application, contributing to chat and e-commerce modules in a live product environment.

- Developed and maintained real-time chat module using Firebase.
- Implemented Cubit for scalable and maintainable state management.
- Designed and optimized state flows to handle real-time updates and message synchronization.
- Integrated Firebase services (Firestore, Authentication, Cloud Messaging).
- Built and maintained e-commerce module, including:
 - Product listing and filtering
 - Cart management
 - Checkout flows

Flutter Developer- Jul 2025 – Present

Motofix - Remote

Contributed to the development of MotoFix, a white-label automotive service platform.

Worked on both the core product and a customized client variant (VW Garage).

- Implemented feature modules using **BLoC** with clear separation of business logic and UI.
- Developed **real-time chat support module** for customer-service interaction.
- Built **SOS emergency assistance feature** with structured request flow.
- Designed and implemented **car service packages and bundled offerings**, supporting dynamic pricing and multi-service booking.
- Developed cart system allowing users to:
 - Add multiple services
 - Modify quantities
 - Manage checkout flow
- Implemented vehicle management module:
 - Add/Edit car details
 - Store VIN number
 - Car license template handling
- Built a quotation **request system** with backend integration.
- Implemented **order history and invoice generation (PDF format)**.
- Ensured state consistency across complex booking and checkout flows using BLoC.
- Delivered a customized variant of MotoFix tailored for a specific client.
- White labeling:
 - Delivered a customized variant of MotoFix tailored for a specific client.
 - Adapted branding, configurations, and feature flags while maintaining shared core architecture.
 - Ensured modularity to support scalable white-label deployments.
- Apps:
 - Motofix – car care companion app ([Google Play](#), [App Store](#))
 - VW Garage – car care companion app ([Google Play](#), [App Store](#))

Technical Skills

Dart, Flutter, BLoC, Cubit, Provider, Clean Architecture, Modular Architecture, Firebase (Firestore, Authentication, Cloud Messaging), REST APIs, Dio, HTTP, Real-time, Hive, Git, GitHub.

Additional Skills

Push Notifications (FCM), Pagination & Lazy Loading, Feature Flags (White-label architecture), CI/CD pipelines, Crash reporting tools, Deep Linking, Payment Gateway Integration.

EDUCATION

Faculty of Arts - Alexandria University - 2017 – 2022

Bachelor's Degree in Geographic Information Systems (GIS)
